

QDrill® is an OLAP reporting tool designed to work through your browser with SAS/IntrNet software.

QDrill® enables all users in your business to create reports and perform analysis with the ease of an intuitive and responsive web interface.

Powerful Analysis

Your data is automatically presented with classification and analysis variables so you can group, separate and perform calculations instantaneously. Dynamic analysis is provided with an interactive drill-down and sort facility.

Performance Measurement

QDrill® enables you to create and manage personal KPI's. Each KPI includes automatic traffic lighting and can be easily customised as required. Your KPI's portfolio(s) are updated as the source data is refreshed.

Intuitive Web Browser Interface

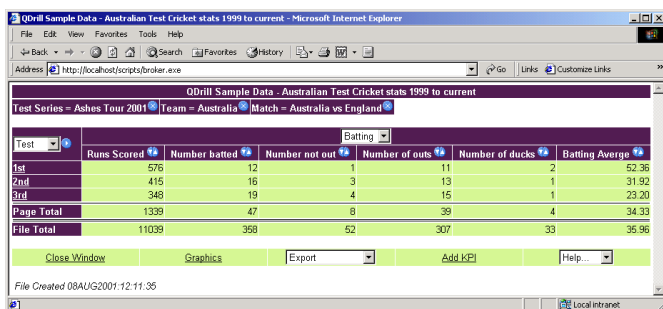

QDrill® uses a familiar web browser interface and includes an online help facility.

Dynamic Visualisation and Reporting

Graph your analysis into standard charts such as column, bar, pie and line. Or do further analysis by drilling down on these charts interactively. Reporting is also easy with the option to export to either CSV, RTF or PDF.

Static Reporting

QDrill® can generate static pages which provides an alternate deployment option.

Interface is stylish and intuitive

Product Requirements

- Web Server
- SAS Software Version 8.2+ -- Base SAS, SAS/GRAPH® and SAS/IntrNet® on additional machine or Web Server

System Administration

System overheads such as installation, security and maintenance are minimised with the use of web technology -- for example:

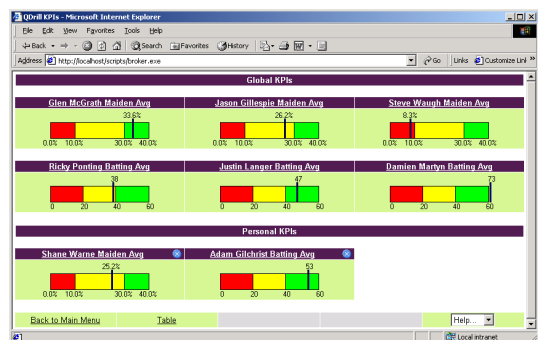

- security is implemented via the web server's user authentication
- when a single point is updated all users will instantly 'see' the new figures
- the software installation requirement for each user is a web browser

Centralised Supervision

Centralised administration is available only to users granted this facility and provides two important functions. Firstly, it enables you to build a profile on overall data usage and analysis patterns, and secondly revise the metadata to incorporate enterprise analysis requirements such as global KPI's or derived values.

Key Features

- Interactive OLAP viewer with both table and chart drill down capabilities
- Intuitive Web Browser interface
- Fast response times for all files
- Corporate & personal KPI's
- Centralised maintenance and administration
- Export of tables to PDF, CSV (MS Excel) and RTF (MS Word)
- Integrated with the security provided by the Web Server
- Drilldown on dimensions minus 'strict' hierarchies

KPI Portfolio

- Call us to arrange a trial or demonstration.
- Visit our website for a static display and product fact sheet.
